

# Hybrid Doors

## Achieve the next level of efficiency

by adding an HCR Model AC or CAC to your existing door. Perfect for high-traffic doorways where ice and infiltration are a challenge, an HCR Air Door provides another layer of protection to assure that the opening remains accessible for workflow, yet closed for costly air infiltration and energy efficiency.

## AC and CAC with VersaFlex™

- Maximizes the energy efficiency of an insulated Hittable Bi-Parting or Single Sliding Door
- Significantly reduces moisture infiltration
- Significantly reduces air exchange between rooms of differing temperature
- AC and CAC is retrofittable to existing Bi-Parting or Single Sliding Doors
- Additional air doors can be added to keep maximizing energy efficiency
- Warm side or cold side mounts

## AC and CAC with Other Door Types –

HCR Air Doors can be used alongside most types of cold storage doors.

Call your HCR representative for more information.

# Hybrid Doors

## AC and CAC with Roll-up Doors

By combining an air door with your currently installed door, you are assuring an efficient air block when your hard door is open, reducing cold air loss and decreasing the problems associated with high-traffic openings, such as ice and safety concerns.

- Maximizes the energy efficiency of a roll-up door
- Effectively reduces moisture infiltration
- Significantly reduces air exchange between rooms of differing temperature
- AC and CAC is retrofittable to existing roll-up doors of any brand
- Additional air doors can be added in a modular process to keep maximizing energy efficiency as door open time increases
- Warm side or Cold side mounts
